

Module HTML 5

HTML5 - New Tags (Elements)

- Tags (Elements)
- `<datalist>`
- `<details>`
- `<embed>`

To embed video in HTML, we use the `<video>` tag. It contains one or more video sources at a time using `<source>` tag. It supports MP4, WebM, and Ogg in all modern browsers. Only Ogg video format doesn't support in Safari

A semantic element clearly describes its meaning to both the browser and the developer. Examples of non-semantic elements: <div> and - Tells nothing ...

**What is the difference between SVG and HTML5
Canvas?**
